

SHOWROOM

01 / THE PROBLEM

Your room. Your taste. Too many tabs.

Inspiration is easy. Turning it into a room you can afford, with furniture you can actually buy, is the hard part.

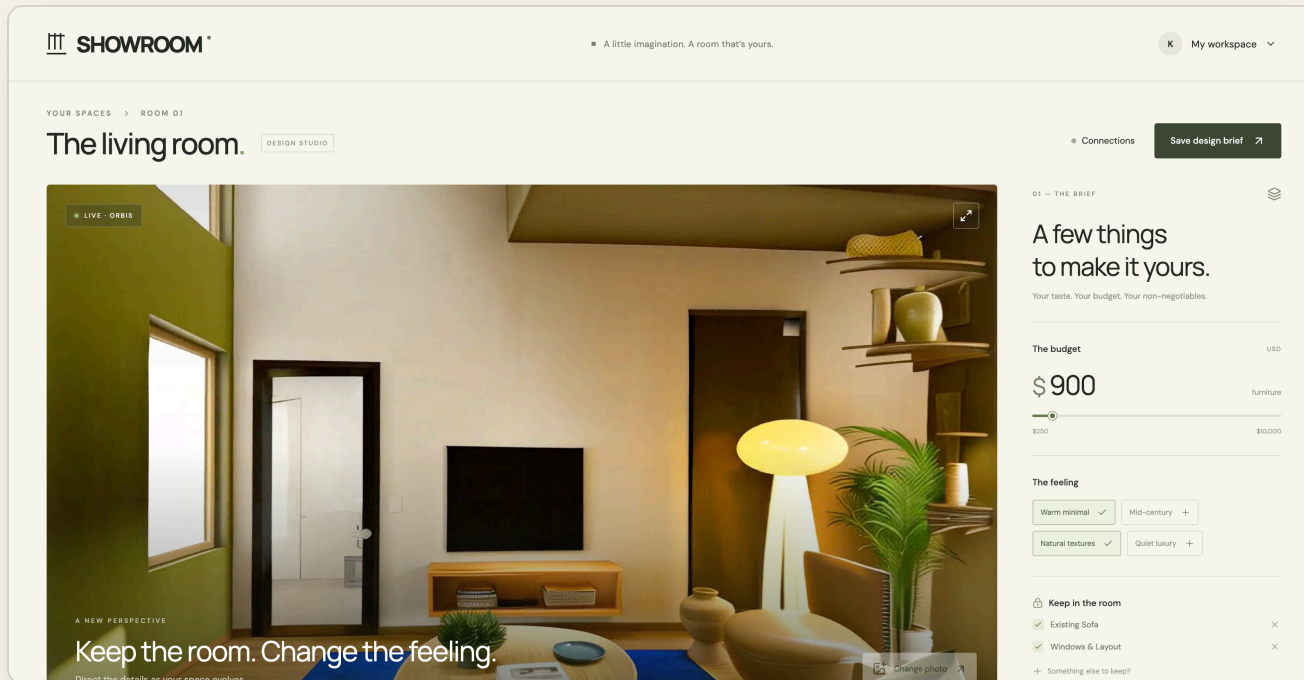

A visual decision workspace for people redesigning one room — and the designers helping them.

SHOWROOM

02 / THE LIVE EXPERIENCE

Think out loud. See the room respond.

One canvas, a continuing conversation.

Upload a room. Set a budget. Keep what matters.
Direct the look with short instructions.

FIRST DIRECTION

“Paint the back wall deep olive green.”

SECOND DIRECTION

“A cobalt rug. Warm evening light.”

Verified: real Orbis frames and two visible direction changes. Geometry may drift; this is an illustrative preview.

From “I like that” to a useful handoff.

01

Bring the room

Photo, spending limit and the pieces that stay.

03

Review the real items

Source links, dimensions and a calculated shopping total.

02

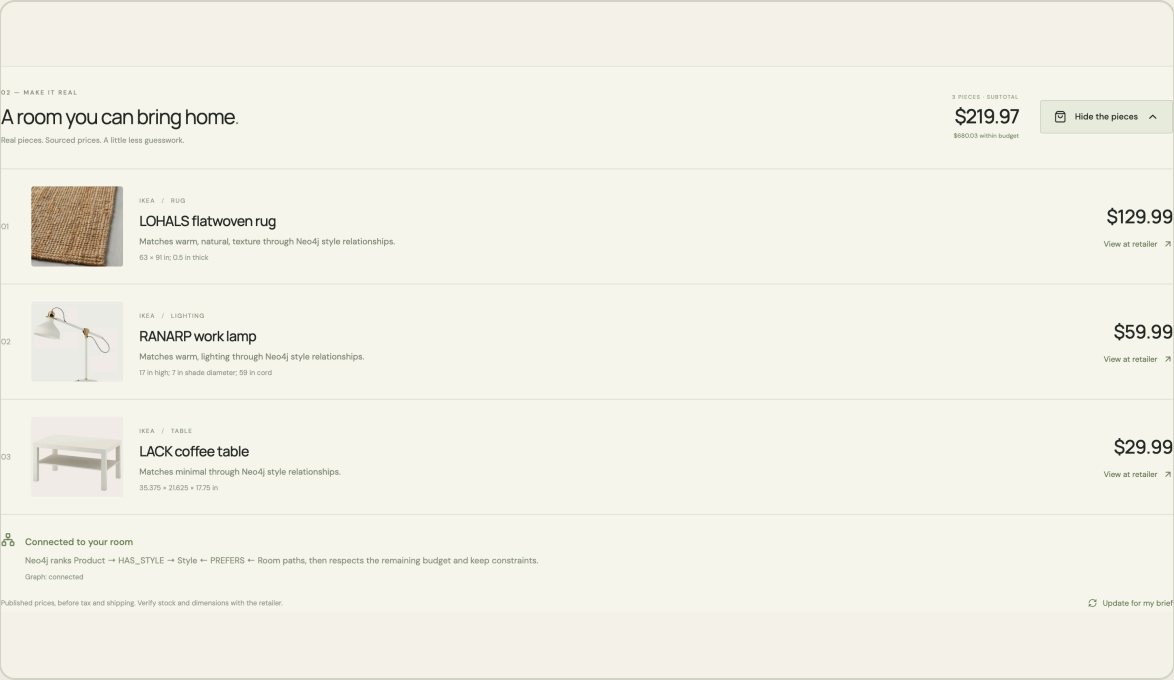

Direct the mood

Two instructions, with persistent constraints and visible stream status.

04

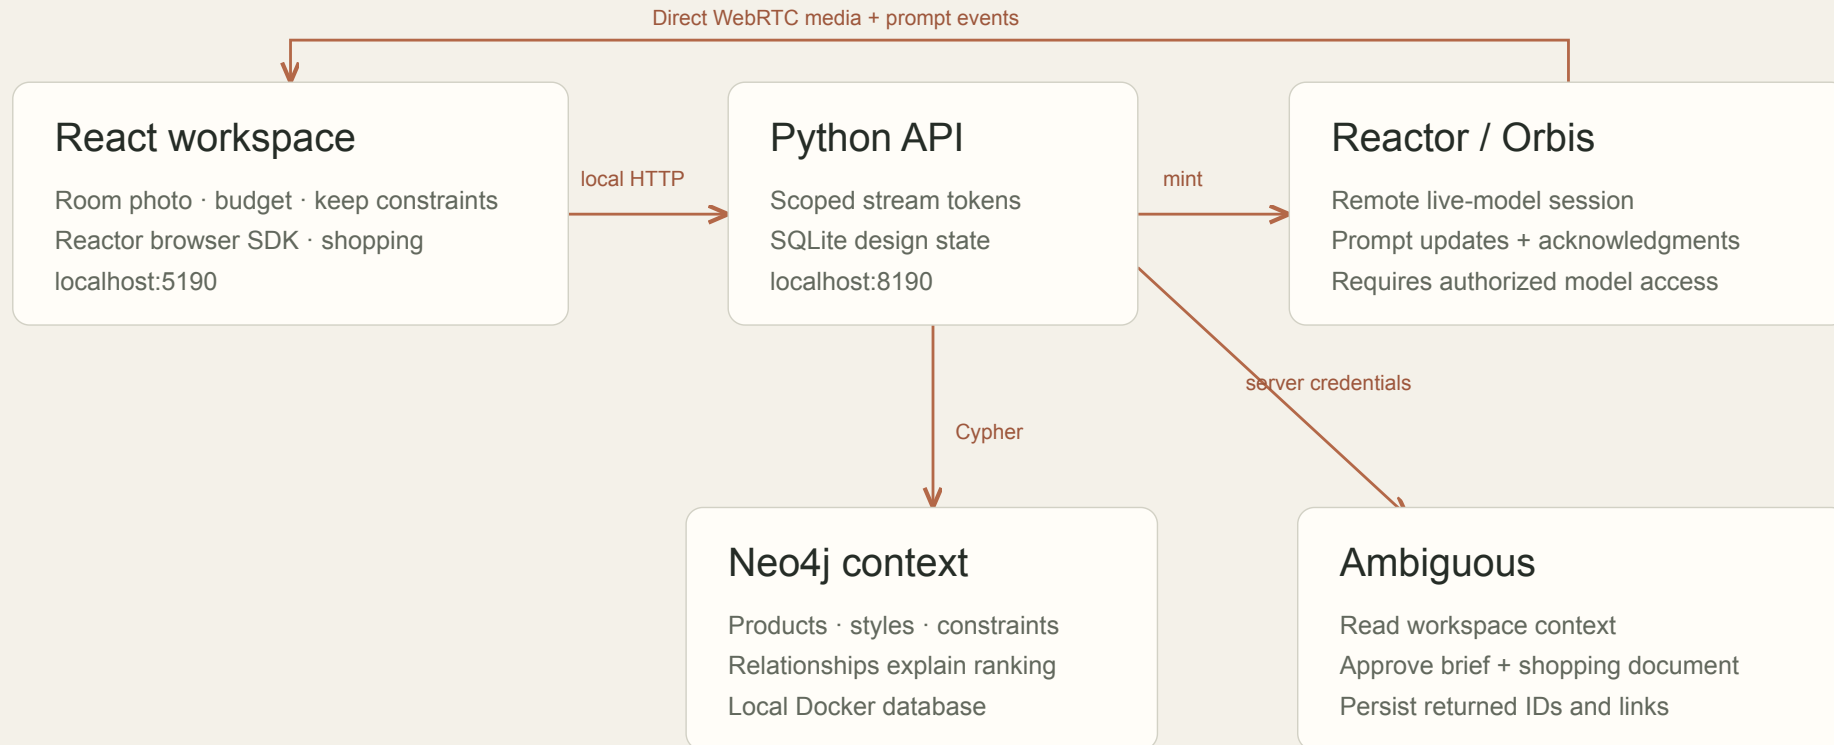

Approve the handoff

Review the brief and list before saving to Ambiguous.

Video is an illustrative preview. Product references substantiate purchasing decisions. Ambiguous reads are live; the exact handoff awaits user approval.

Memory behind the mood.

Graph context makes recommendations explainable. Server-side credentials mint scoped stream access. Approval and returned result links make the handoff inspectable. Qoder authored five passing tests. The full backend suite passes 18; evidence is in the repository.

Start with one room. Earn the next decision.

A focused entry point: renters and homeowners planning a living-room refresh, with an eventual workspace for independent interior designers.

The customer

Someone with a real room, a fixed budget and a fear of buying the wrong piece.

The business

Test paid design briefs and a designer subscription. Retail referrals are an optional, disclosed model.

The next proof

Run ten guided room sessions. Measure time to a saved brief, budget fit and willingness to pay.

Business hypotheses, not traction claims. No revenue, customer counts, hardware benchmarks or award outcomes are asserted.
